AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

Claims 1 to 8. (Canceled).

- 9. (New) A contact surface for an electrical contact, comprising: an Ag layer galvanically deposited on a copper-based substrate, the Ag layer
- including finely dispersed graphite particles in a quantity of between 1 and 3 weight % of the Ag layer, the graphite particles having a length in a range of 0.5 to 20 μ m.
- 10. (New) The contact surface according to claim 9, wherein the graphite particles have a length in the range of 1 to 10 μ m.
- 11. (New) The contact surface according to claim 9, wherein the graphite particles have a thickness in the range of 0.05 and 2 µm.
- 12. (New) The contact surface according to claim 9, wherein a ratio of thickness to length of the graphite particles is in the range of 1:2 to 1:40.
- 13. (New) The contact surface according to claim 9, wherein the graphite particles are arranged at least one of (a) anisotropically and (b) statistaically along a habitus plane of the Ag layer.
- 14. (New) The contact surface according to claim 9, wherein a layer thickness of the Ag layer is in the range of approximately 1 to approximately 10 μm.
- 15. (New) The contact surface according to claim 9, wherein the graphic particles do not simultaneously include a maximum thickness and a maximum width.
 - 16. (New) A contact surface for an electrical contact, comprising: a copper-based substrate; and

an Ag layer galvanically deposited on the copper-based substrate, the Ag layer including finely dispersed graphite particles in a quantity of between 1 and 3 weight % of the Ag layer, the graphite particles having a length in a range of 0.5 to $20 \ \mu m$.

17. (New) A method, comprising:

providing a contact surface in an automotive plug connection in close proximity to an engine, the contact surface including an Ag layer galvanically deposited on a copper-based substrate, the Ag layer including finely dispersed graphite particles in a quantity of between 1 and 3 weight % of the Ag layer, the graphite particles having a length in a range of 0.5 to 20 μ m.
